## 1 Prove that the Frechet distance is a distance metric

Prove that the Frechet distance is a distance metric.

To be a distance metric, you must satisfy 4 requirements:

Let  $X$  = discrete space

A metric is a function  $d: X \times X \rightarrow \mathbb{R}$  such that:

1.  $d(x,y) = d(y,x)$
2.  $d(x,y) = 0 \Leftrightarrow x = y$
3.  $d(x,y) + d(y,z) \geq d(x,z)$
4.  $d(x,y) \geq 0$

So,

## 2 Recurrence Relations

### 2.a $T(n) = 2T(n/4) + n^2$

Master's Theorem:

$$T(n) = aT\left(\frac{n}{b}\right) + f(n)$$

Where,  $a \geq 1$ ,  $b > 1$ ,  $f(n)$  is asymptotically positive

$$T(n) = 2T(n/4) + n^2$$

$$a = 2, b = 4, f(n) = n^2$$

$$n^{\log_b a} \Rightarrow n^{\log_4 2} \Rightarrow n^{1/2}$$

Case 3:

if  $f(n)$  is  $\Omega(n^{\log_b a + \epsilon})$  for some  $\epsilon > 0$  and if  $f(n/b) \leq f(n)$ , then  $T(n) = \theta(f(n))$

Therefore,  $T(n) = \theta(n^2)$

## 2.b $T(n) = 4T(n/2) + n$

Master's Theorem:

$$T(n) = aT(\frac{n}{b}) + f(n)$$

Where,  $a \geq 1$ ,  $b > 1$ ,  $f(n)$  is asymptotically positive

$$T(n) = 4T(n/2) + n$$

$$a = 4, b = 2, f(n) = n$$

$$n^{\log_b a} \Rightarrow n^{\log_2 4} \Rightarrow n^2$$

Case 1:

if  $f(n) = O(n^{\log_b a - \epsilon})$  for some  $\epsilon > 0$  then  $T(n) = \theta(n^2)$ .

Therefore,  $T(n) = \theta(n^2)$

## 2.c $T(n) = 3T(2n/3) + 4n$

Master's Theorem:

$$T(n) = aT(\frac{n}{b}) + f(n)$$

Where,  $a \geq 1$ ,  $b > 1$ ,  $f(n)$  is asymptotically positive

$$T(n) = 3T(2n/3) + 4n$$

$$a = 3, b = 2/3, f(n) = 4n$$

$$n^{\log_b a} \Rightarrow n^{\log_{3/2} 3} \Rightarrow n^{2.71}$$

Case 1:

if  $f(n) = O(n^{\log_b a - \epsilon})$  for some  $\epsilon > 0$  then  $T(n) = \theta(n^{2.71})$ .

Therefore,  $T(n) = \theta(n^{2.71})$

## 2.d $T(n) = T(n/2) + T(n/3)$

Our longest path in this tree is the rightmost path, following a sequence:  $\log_3 n$ .

So our initial guess is for this recurrence is  $O(n \log n)$ .

## 2.e $2T(n/2) + O(\log n)$

## 3 Climbing Stairs Problem
